PROFESSIONAL SUMMARY

AI Automation Specialist (fresher) with hands-on internship experience building **AI-driven workflows** and integrating **LLMs** (Google AI APIs, **GPT-4**-class models) into production web applications. Skilled in **Python**, **REST API** / **JSON** integrations, and building **automated workflows** that reduce manual process steps and improve operational efficiency. Strong **analytical thinking** with proven ability to audit manual processes, break complex tasks into logical automated steps, and document new automations for team training. Eager to bring end-to-end **process automation** and **AI integration** skills to a fast-paced automation-first team.

TECHNICAL SKILLS

- Automation & Workflow Tools: **Make.com**, **Zapier** fundamentals, custom **Python scripts** for **workflow automation**
- AI Integration: **LLMs** (**GPT-4**-class models, **Claude**), Google AI APIs, **NLP**, image recognition, recommendation systems
- API Integrations: **REST API** design & consumption, **JSON** data handling, **Postman**, webhook-based automation
- Backend: **Python**, Django, Node.js basics
- Databases: MySQL, MongoDB, Firebase
- Frontend: React, responsive design, Figma (UI/UX prototyping)
- Process & Documentation: **Process analysis**, **system monitoring & troubleshooting**, **technical documentation**, team training guides
- Tools & Platforms: Git, VS Code, Windows OS, CMD, browser dev tools
- Soft Skills: **Analytical thinking**, remote collaboration, bi-daily reporting, mentor-driven iteration

WORK EXPERIENCE

AI Intern — Devrai Agritech

Jan 2026 – Apr 2026

Remote | Shivajinagar, Pune | Full-time internship (Mon–Fri, 10 AM–5 PM)

- Engineered and deployed **AI-driven** features — including a product recommendation engine and intelligent search — into the company's e-commerce and farm-management platform, **automating manual workflows** and improving operational efficiency across agricultural operations.
- Implemented **Google AI APIs** (LLM-based NLP and image recognition) into Django-based web applications; designed **REST API** endpoints consumed by a React front-end, **automating data entry** and reducing manual processing steps in the internal management system.
- Audited existing manual processes** and built end-to-end **automated pipelines** from data preprocessing through model integration and deployment; maintained bi-daily progress reports and implemented feedback within the same sprint cycle — zero missed reporting deadlines across the 6-month engagement.
- Preprocessed and validated structured and visual datasets used for model training; applied **quality assurance and monitoring checks** at each pipeline stage to ensure accuracy and uptime before production integration.
- Collaborated asynchronously in a remote-first team, demonstrating accountability, punctuality, and proactive communication aligned with company SOP.

PROJECTS

LMS Automation Platform — Moodle API Integration

- Built an **automated workflow** layer on top of a Moodle-based Learning Management System, using the **Moodle Web Services REST API** (REST/JSON) to automate student enrollment, course creation, and grade-sync between the LMS and an internal Django backend.
- Designed **Python scripts** and scheduled jobs to automate repetitive admin tasks (bulk enrollment, assignment reminders, completion reports), cutting manual admin effort by an estimated ~50%.
- Implemented **API authentication (token-based)**, error handling, and **monitoring/troubleshooting** for scheduled sync jobs to ensure accuracy and uptime of automated data flows.

- Wrote **clear documentation** and a setup guide so non-technical staff could configure and run the **automations** independently.

AI-Nexus — Multi-model AI Integration Platform

- Architected a platform integrating multiple **Google AI models** (NLP, image recognition, generative AI) into a single Django + **REST API** backend; built modular **API** wrappers enabling plug-and-play model swapping without frontend changes.
- Outcome: reduced integration time for new AI models by ~60% vs. direct API calls; deployed live and tested across 3 use-case domains.

Movie Recommendation System — ML Pipeline

- Designed and implemented a hybrid recommendation engine combining user-user similarity, item-item similarity, global averages, and matrix factorization; cleaned and validated 1,000+ interaction records before model training.
- Outcome: achieved measurable accuracy improvement using matrix factorization vs. baseline global average; documented model selection rationale for reproducibility.

EDUCATION

B.E. — Information Technology

2022 – 2026

Vidyavaridhini's College of Engineering and Technology (VCET), Mumbai University

Relevant Coursework: Data Structures & Algorithms, Computer Networks, Cybersecurity, Full-Stack Development, Database Management

CERTIFICATIONS

- Data Science with Python — 2026

ACHIEVEMENTS

TECHBLITZ '26 — Hackathon Winner, VCET

- Won a time-boxed, spec-driven design challenge — applied rapid prototyping, attention to detail, and iterative delivery under a hard deadline.

Technical Team Lead — VCET College Hackathon (2023)

- Coordinated 15+ participants across tracks; managed real-time task allocation and reporting to faculty coordinators — demonstrated leadership and cross-functional communication.

Taskforce Member — VCET Student Council

- Organized logistics and communication for college-wide events; experience in structured coordination and deadline-driven execution.
